| Dhaka, Bangladesh

### SUMMARY

Production AI engineer who ships - not demos. ~2 years building fault-tolerant async pipelines, custom RAG systems from scratch, and distributed image generation infrastructure. Comfortable owning end-to-end systems with zero downtime across scraping, LLM orchestration, and computer vision workloads.

### EXPERIENCE

#### Rokomari.com · AI Engineer

Feb 2025 – Present

- Built an autonomous **FastAPI/Celery** pipeline generating **7,000+ SEO product descriptions/month** — eliminated duplicate API costs via distributed Redis locks, DB-level idempotency, and automated rollbacks
- Engineered a **framework-less Text-to-SQL RAG pipeline** that autonomously resolves **200+ complex internal queries/month**, cutting report turnaround from up to 72 hours to instant
- Deployed distributed image generation on **GCP Vertex AI** processing **11,600+ product images/month** — orchestrated via Docker Compose and Celery task queues
- Built bulk background removal pipeline using **BriaAI RMBG v2.0** with edge refinement, handling peak loads of **18,000+ catalog images/month**
- Maintained **24/7 Selenium/Playwright scrapers** with CAPTCHA evasion, session recovery, and IP rotation feeding a multi-agent demand intelligence engine

#### UXToDo · Python Developer

Jan 2024 – Nov 2024

- Built functional AI prototypes including a **medical chatbot** and **semantic search** tools
- Developed REST API endpoints and comprehensive test suites on a senior-architected enterprise backend

### PROJECTS

#### HL7 SIU^S12 Parser — Python · asyncio · Docker · zero dependencies

- Production-grade healthcare data parser — processes **3.5 GB files (17.5M messages)** using only **12 MB RAM** via generator-based streaming architecture
- Built dual fail modes (soft/strict), rotating log system, and 565-line test suite covering all edge cases — zero external dependencies by design

#### Rokomari Demand Intelligence Scraper — Camoufox · Playwright · Pydantic v2 · PostgreSQL async

- Fingerprint-safe async scraping pipeline with lxml XPath parsing, Pydantic v2 validation, and time-series snapshots in PostgreSQL via SQLAlchemy 2.x

#### Musica — Python · ffmpeg · YouTube · Browser UI

- Personal tool combining ffmpeg audio processing with YouTube ingestion and a browser-based playback UI — built for own use case

### SKILLS

**Languages:** Python, SQL, Bash, JavaScript, C/C++

**AI / ML:** LLM Orchestration (Llama 3, Gemini, OpenAI), ReAct Agents, RAG, Semantic Search, Vector DBs, NLP

**Backend & DB:** FastAPI, Django, Celery, Redis, PostgreSQL, MySQL, SQLAlchemy ORM

**Cloud & Infra:** GCP (Vertex AI, GCS), Docker, Selenium, Playwright, Camoufox, Stealth Scraping

### EDUCATION

**B.Sc. Computer Science & Engineering** · Bangladesh University of Business and Technology (BUBT) · 2019 – 2023
